Career History

Globant, Buenos Aires, Argentina

Nov. 2019 – Present

QA Automation Engineer.

Ensured that validated deliverables meet functional and design specification requirement. Created automation scripts to automate test cases for new software releases, enhance data validation and streamline quality assurance and testing. Automated testing end to end of software functions with Python using Pytest. Automated testing of backend API for deploy resources like Virtual Machines, resources groups, etc. Worked on Software Releases with development team to evaluate and release application changes.

IBM, Buenos Aires, Argentina

Nov. 2018 – Nov. 2019

QA Automation Engineer.

Ensured that validated deliverables meet functional and design specification requirement. Created automation scripts to automate test cases for new software releases, enhance data validation and streamline quality assurance and testing. Automated testing end to end of software functions with Java using TestNG framework and APPIUM for mobile (Android and IOS). Automated testing of backend API. Worked on Software Releases with development team to evaluate and release application changes. Wrote

automated testing scripts with Selenium that reduced validation testing by at least 50%. Developed and executed comprehensive test plans for a complex and highly configurable application.

Partnered with Product Managers, Developers, System and Database Administrators for product deployments in line with agile methodology. Executed black box, functional and regression tests in multiple web applications using Chrome, Firefox, IE browsers and mobile applications. Identified any potential quality issue and escalate potential quality issues to the develop team. Designed and maintain automation test framework for scalability. Trained new QA Staff on black box, JAVA, automation and APPIUM.
